

ENERGY POLICY

Acerinox Europe's commitment, regarding the use and consumption of energy, is to develop their production in a responsible way and considers the costs of energy as an important aspect. The responsibility for the use and consumption of energy is in line with the objectives of the organization in terms of productivity, competitiveness and the environment. To achieve this alignment, the organization not only ensures compliance with the legal requirements that may be applicable, but also subscribe voluntarily to others, such as the implementation and certification of an Energy Management System according to ISO 50001.

The implementation of the Energy Management System means:

- The commitment to continuously improve the energy performance of the organization.
- Ensuring the availability of information and provide human and technological resources necessary to fulfill the objectives and goals.
- Support the purchase of energy-efficient products and services as well as design to enhance energy performance.
- Ensure that employees are properly trained and informed on the energy performance according to their particular roles within the organization.
- Carry out proper documentation and communication of efficient energy management at all levels, so that the staff can make comments or suggestions for improving the EnMS.
- Set energy goals and action plans consistent with the Energy Policy in the relevant levels of the organization.

The management of the factory, Acerinox Europe, will evaluate the performance of the Energy Management System annually and will make periodic checks of the established operational controls.

This Energy policy will be reviewed annually by the factory management of Acerinox Europe and will be communicated at all levels of the organization and published to inform all interested parties.
